---

**Susan:**

We have completed the sampling of 8 of the 11 vac boxes/roll-off boxes. We will continue with vac boxes and frac tanks starting tomorrow.

On another note, Dana Transport will be coming to the Site tomorrow to remove one of their frac tanks that has some minor dry sludge in the bottom that they will profile and dispose. They will also be sampling the remaining 6 to determine how much it will cost them to dispose of the water and then pick up the remainder of their frac tanks.

Dynamic Rental Systems will come out tomorrow to look at their equipment (2 vac boxes and a frac tank). They have 2 vac boxes where the waste will need to likely be incinerated and I don't think I can convince them to do that since that would be more than what their vac boxes are worth. They did indicate that they would maybe provide us with shippable vac boxes to replace the non-shippable ones to help us speed up the process of getting their boxes back to them. I will see if I can work out a deal where they provide us alternate vac boxes and pick up and have cleaned at their expense. I will see what they are interested in doing on the frac tank.

I will give you an update tomorrow.

Thanks

**Gary Moore**
